These are third and fourth Mini Projects. Our third project is about the data of hotel bookings. We have used some commands which will be easy for the user to check about different things like in which time the bookings are more and in which time they are less, how many customers are cancelling the hotel bookings and more data like this. Our fourth Mini Project is about the data of Titanic. It shows all the data in a way that is easy to understand. We have also used plotly. It makes understanding the data in an easy way. At last, we have also performed pandas profiling. It extends the DataFrame for quick data analysis.
